

WAHED FINANCIAL ANALYST CASE STUDY

Haminatou Coulibaly

Financial Analyst (FP&A) Candidate

Submission Date: 02 December, 2025

EXECUTIVE SUMMARY

This document demonstrates the completion of Wahed's Financial Analyst case study, including:

- A fully functional n8n automation workflow;
- Three data validation checks for multi-country operations;
- Financial insights from the provided transaction data;
- Ready-to-deploy automation solution.

DELIVERABLE 1 - DATA VALIDATION CHECKS

QUESTION: *Describe 2–3 data validation checks you would build into an automated workflow.*

ANSWER:

1. Multi-Currency Conversion Accuracy Validation
 - What: Automated validation of GBP to USD/AED/SAR conversions using daily exchange rates;
 - Why for Wahed: Prevents financial misreporting in consolidated statements across 31 countries;
 - Implementation: Real-time FX API integration with alerts for variances >2%.
2. Transaction Category Mapping Completeness Check
 - What: Ensures all transactions are mapped to Wahed's chart of accounts
 - Why for Wahed: Essential for accurate variance analysis and Shariah-compliant reporting;
 - Implementation: Keyword-based auto-categorization with manual review queue;
3. Date Consistency & Period Alignment Validation.
 - What: Validates all transactions use same reporting periods (month-end close);
 - Why for Wahed: Eliminates consolidation delays and ensures timely monthly reporting;
 - Implementation: Automated date format standardization in n8n workflow.

Status: Implemented in the attached n8n workflow

DELIVERABLE 2 - AUTOMATION WORKFLOW

QUESTION: *Design a workflow that: Trigger monthly, Load data, Transform, calculate variance, Generate AI summary.*

ANSWER:

n8n Workflow Built and Tested:

1. HTTP Request Node

- Purpose: Fetches raw transaction data from Google Sheets;
- Configured: Connected to provided dataset URL;
- Evidence: Screenshot 1 shows successful data retrieval

2. Data Processing Node (Code)

- Purpose: Validates, cleans, and converts currencies (GBP to USD);
- Configured: Implements the 3 validation checks above;
- Evidence: Screenshot 2 shows processed transactions.

3. Financial Analysis Node (Code)

- Purpose: Calculates variances and generates insights;
- Configured: Flags variances >5% revenue / >10% expenses;
- Evidence: Screenshot 3 shows complete analysis output.

4. Scheduling Ready

- Trigger: Can be set as Cron job for 1st of every month;
- Automation: Full workflow tested and functional.

Status: Complete workflow attached as `Wahed_Case_Study_Workflow.json`

DELIVERABLE 3 - TREND & VARIANCE ANALYSIS

QUESTION: *Using the raw transaction data: Identify month-over-month changes, Spot spikes, Provide explanations*

ANSWER:

Analysis of Provided Dataset:

Month-over-Month Changes Identified:

- January shows highest marketing spend (Brand awareness campaigns);
- Regular SaaS subscriptions visible monthly (AWS, CRM recurring charges);
- The UK region dominates the initial dataset with the majority of transactions.

Significant Spikes Spotted:

1. £44,604.61 - Sales commission payout in January (UK) - Largest single transaction;
2. £12,894.09 - Brand awareness campaign (UK) - Major marketing expense;
3. £14,473.19 - Utilities and maintenance (UK) - Operational spike.

Variance Insights:

- Marketing expenses vary significantly (campaign-based spending);
- Fixed costs (SaaS, utilities) show predictable monthly patterns;
- Commission payouts represent the largest expense category in sample data.

Recommendations for Wahed:

1. Implement automated alerts for transactions >£10,000;
2. Create monthly variance dashboard for UK/MENA regions;
3. Standardize category mapping across all 31 countries;
4. Schedule this n8n workflow for automated monthly reporting.

Status: Analysis completed using actual provided data

CONCLUSION

This submission provides:

1. Three specific data validation checks for Wahed's 31-country operations.
2. Complete, working n8n automation workflow ready for scheduling.
3. Direct analysis of provided transaction data with actionable insights.

The solution demonstrates practical automation skills and understanding of Wahed's financial reporting needs in an ethical fintech context.

Recommended 30-60-90-day rollout plan:

- Days 1-30: Deploy this workflow for UK/MENA, establish baseline metrics;
- Days 31-60: Add remaining regions, implement automated alerts;
- Days 61-90: Integrate with Wahed's existing finance stack, train team members.

Total implementation cost: < 40 engineering hours.

Expected ROI: 15-20 hours monthly saved on manual reporting.
